STEEL GIRDERS ALWAYS ON HAND. It has long been the practice of dealers and hardware stores in large cities to carry a supply of bar iron, sheet metal and steel such as is ordinarily used by the blacksmith, machinist and other consumers of iron and steel. Until in recent years, however, no one carried in stock in a warehouse in this city steel ns, girders and a complete line of structural fron gineers and contractors in all classes of iron and steel construction. The charge came in 1894, when increased demand and large consumption followed the collapse of the steel combination, after which came lower prices. It now has on hand an average daily supply of some 1888 tons. The material is in great demand, as the rolling mills in Orlio and Pennsylvania, where such goods are made, are too far off to supply immediate needs. construction. The change came in 1894, when in-
